

Press Release

June 2007

VINTEN RADAMEC – THE MOST EFFECTIVE, AFFORDABLE BROADCAST ROBOTICS AVAILABLE ON SHOW AT IBC 2007

Stand No 9.440

RAI, Amsterdam

7-11 September 2007

Vinten Radamec is the world's leading and most innovative provider of robotic camera support systems and at IBC 2007, they will be demonstrating the latest, most cost effective systems available to the professional broadcasting industry.

Vinten Radamec already offers the widest range available of robotic heads, pedestals and controllers, suitable for studio, OB and legislative environments. At IBC 2007 a selection of highly sophisticated, exciting new products will be on show for the first time as well as the latest additions to the widely acclaimed Fusion Range which utilises some of the most advanced camera support technology in the world and the Quattro SE pedestal, already establishing itself as the ultimate manual tracking solution for virtual studios.

Highlights from the Fusion Range include the FHR100 robotic only head, which includes all the standard features from the FH100 full function head, simply without the manual control option. This makes it smaller, lighter and particularly cost-effective.

When teamed with the FBH175 bolt-on height drive, which provides robotic control of the height of most lightweight manual Vinten® and Sachtler® pedestals, this makes the switch to a robotic studio much more affordable.

Also making its first show is the new legislative control system, with a new user interface designed to maximise the scope and functionality available to the operator.

The new legislative system will be used in conjunction with the FCS-16 Panel with on board control system, now in its production format, with an integrated screen, complete control system and limited further networking requirements to Fusion products, and compatibility with the Radamec and Vinten Autocam product ranges.

Developed from the award-winning Quattro S, the new Quattro SE has all the benefits of the ergonomically assisted lifting column, the small doorway width and the on-shot performance of its predecessor. In addition, high quality encoders have been built into the wheels and column giving precise real time digital electronic positioning over the floor and during elevation. Together with a host of other digital calibration features, this makes the accuracy of the Quattro SE.

For further information on the Vinten Radamec range of robotic camera support systems and accessories, go to www.vintenradamec.com or come and see them in action at Stand No 9.440 at IBC 2007.

About Vinten Radamec

Vinten Radamec is the world's leading provider of robotic camera support systems with the largest range covering robotic heads, pedestals and controllers suitable for studio, OB and legislative environments. With the widest customer support network and distribution infrastructure, and the most far reaching development programme in the industry, Vinten Radamec's aim is to continue to grow the number of robotics users in the world's broadcast industry.

Along with five other leading brands in the broadcast industry, Vinten Radamec is part of Camera Dynamics Ltd, a Vitec Group company.

About The Vitec Group plc

The Vitec Group plc is acknowledged as a global leader in the supply of equipment and services to the broadcasting, entertainment and photographic industries and has established a reputation for technical excellence and superior engineering along with an astute business strategy which has seen it grow by acquisition. Innovation is a cornerstone of the Group's activities and the organisation is committed to a policy of continuous product development. With revenues (2006) of £222m (\$400m) and over 1500 employees world-wide, its products are distributed in almost 100 countries, through a strong, fully-resourced distribution network or direct to the end user or corporate customer.
